-------------------	---------------------	--------------	-----------------	-----------	----------------

TOOLS REQUIRED:

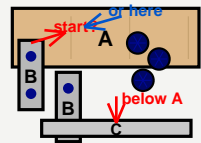

Wrench (size TBD) Screwdriver Patience (not included) Friend (optional*)

* Friend not liable for damages. Friend must have assembled furniture before. Preferably recently.

★ IMPORTANT: Begin reading from BOTTOM of page. Work UPWARD to Step 1. ★

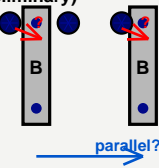

1 Step 1: Unbox and Identify Parts

Open box. Remove all contents.
Lay parts on floor or another surface.
Cross-reference with parts list above (top of page — you are reading bottom-up).
If parts are missing, assemble anyway.

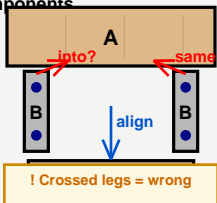

3 Step 3: Pre-Attach Leg Units (Preliminary)

Attach two [B] legs. Must be parallel.
Loosely insert bolts (■) at both ends.
Do not fully tighten yet (unless bold).
Repeat with remaining two [B] legs.
Crossed legs are probably wrong.

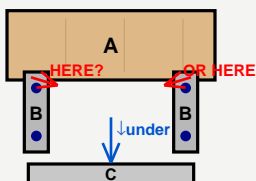

5 Step 5: Affix Leg-Adjacent Components

Attach legs [B] to underside of [A].
Ensure legs face downward (generally).
Insert crossbar [C] between both [B] legs.
The crossbar should cross. This is key.
Refer to art (right). Or don't.

7 Step 7: Finalize and Enjoy(?)

Place desk near a wall (or not).
Sit. Confirm desk is desk-shaped.
If wobbling, refer to Step 4.
This step may be optional.
You are done. Probably.

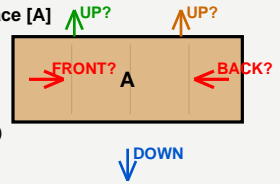

NOTES & WARNINGS

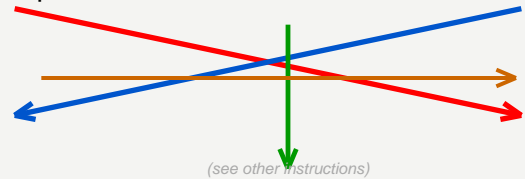

- If desk wobbles, try a different floor.
- Bolts marked ■ are interchangeable (mostly).
- Leftover parts are normal and expected.
- Step 4 is intentionally undescribed.
- Assembly time: 20 min to 3 days.
- Desk not responsible for any injuries.
- For support: re-read Step 4.

2 Step 2: Orient Desktop Surface [A]

Place panel [A]. Put it somewhere flat.
Determine which side faces up (smooth? or the other?). Arrows indicate both.
Do NOT attach anything yet.
(Step 3 is below this — you read upward.)

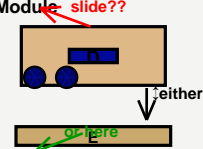

4 Step 4:

6 Step 6: Insert Drawer-Adjacent Module

Insert [D] into slot, or near the slot.
Attach [E] below [D] (or above; see arrow).
Confirm fit is 'snug' (definition varies).
Tighten bolts (qty: approx.).
Do not over-tighten (definition also varies).
